Month Names:
This named range (months) is used as the input for the combo box.

startDate 8/1/17

The Start Date:
This named formula (*startDate*) is the first day of the first month in the yearly calendar, defined by the *month* and *year* chosen by the user.

Method for creating a monthly calendar without using arrays

August 2017

	Sun	Mon				Sat
	1	2				7
1						5
2	6	7				12
3	13	14				19
4	20	21				26
5	27	28		30	31	
6						

How it Works:
This calendar is included to show how the more complex array function works. Note the use of mixed absolute and relative references that enable you to copy the formula down and across. This is basically what the array formula is doing for you.

monthNames *startDates*

August	8/1/17
September	9/1/17
October	10/1/17
November	11/1/17
December	12/1/17

Adding additional months:
Insert a new row (before the last month in the list) and copy the formulas down.

July	7/1/19
